

Eric Daniel Hutabarat

Software Engineer

ericdaniel.dev@gmail.com | github.com/erichutabarat | linkedin.com/in/eric-daniel-hutabarat

Profile Summary

A graduate of the Sumatra Institute of Technology majoring in Informatics Engineering, with experience in front-end development, back-end development, database management, mobile application development, the Internet of Things, and DevOps.

Education

Institut Teknologi Sumatera

August 2021 – November 2026

Bachelor of Computer Science

GPA: 3.32 / 4.00

Focused on Frontend Engineering, Backend Development, Database Management, Mobile Application Development, Version Control with Git, and Internet of Things (IoT) Systems.

Dicoding – Frontend and Backend Development

February 2024 – July 2024

Certified Independent Study

GPA: 4.00 / 4.00

Completed intensive training in Frontend and Backend Development, including web application development, JavaScript programming, React, backend services, and software development practices.

Experience

Full-Stack Web Developer (Intern)

June 2024 – August 2024

- Developed a web application using Next.js and Supabase to collect, manage, and analyze survey responses from guests.
- Designed and implemented responsive user interfaces and database schemas for seamless data gathering and real-time updates.

Freelance Software Engineer

2023 – Present

- Developed backend services using Go and PostgreSQL following REST API architecture.
- Built containerized applications using Docker and deployed services on Linux VPS.
- Implemented authentication, database management, and API integration.

Projects

Deteksi Cemas – Anxiety Level Detection Mobile Application

- Developed a mobile application for anxiety level detection using Flutter, with a backend service built using Golang Gin and MySQL database integration.
- Integrated IoT devices and machine learning models developed by teammates to collect physiological data and provide anxiety level analysis.
- Containerized backend services using Docker to improve deployment consistency and application scalability.

MySDLC – Software Development Lifecycle Management Platform

- Built a project management platform using Next.js, Go, GORM, and MySQL.
- Implemented project tracking, SDLC phases, team collaboration, and role-based access control.
- Deployed using Docker Compose with automated container builds.

IoT Automatic Transfer Switch Monitoring System

- Developed ESP32-based monitoring system for electrical parameters.
- Integrated MQTT communication, Firebase Realtime Database, and PostgreSQL storage.
- Designed backend services for real-time monitoring and historical data analysis.

Technical Skills

Languages: Go, JavaScript, TypeScript, Dart, Python, SQL

Backend: Go Gin, Express.js, FastAPI, Prisma ORM, GORM

Frontend: Flutter, Next.js, ReactJS, Tailwind CSS, Figma

Database: MySQL, PostgreSQL, Firebase

DevOps: Docker, Linux, Nginx, GitHub Actions

Certifications

Learn Git Basics with GitHub – Dicoding

December 2024

Certified Independent Study Program

Certificate: [Verification Link](#)

Learn to Create Front-End Web for Beginners – Dicoding

December 2024

Certified Independent Study Program

Certificate: [Verification Link](#)

Beginner Back-End Learning with JavaScript – Dicoding

December 2024

Certified Independent Study Program

Certificate: [Verification Link](#)

Learn Intermediate Web Development – Dicoding

December 2024

Certified Independent Study Program
