Eric Daniel Hutabarat, S.Kom.

Fullstack Developer | Mobile Developer

ericdaniel.my.id ericdaniel.dev@gmail.com linkedin.com/in/eric-daniel-hutabarat

PROFESSIONAL SUMMARY

Software Engineer with expertise in full-stack web development, backend engineering, and cloud deployment. Adept at developing high-performance REST APIs with Go, creating responsive user interfaces with Next.js, and deploying containerized applications via Docker and Linux VPS. Combines a rigorous academic background in Informatics Engineering with practical project and internship experience.

TECHNICAL SKILLS

Languages: Go, JavaScript, TypeScript, Dart, Python, SQL

Frontend: Next.js, ReactJS, Flutter, Tailwind CSS, NiceGUI

Backend: Go Gin, Express.js, FastAPI, Prisma ORM, GORM

Database: MySQL, PostgreSQL, Firebase, Supabase

DevOps: Docker, Docker Compose, Linux, Nginx, GitHub Actions

Testing: Jest, Postman, Go testing

Tools: Git, GitHub, Figma, VS Code, Postman

IoT: ESP32, MQTT

PROFESSIONAL EXPERIENCE

Full-Stack Web Developer (Intern) June 2024 – August 2024
Dinas Perkebunan dan Peternakan Provinsi Sumatera Utara - Medan

- Developed a web application using Next.js and Supabase to collect, manage, and analyze survey responses from guests.
- Designed and implemented responsive user interfaces and database schemas for seamless data gathering and real-time updates.

Backend Developer & Mobile Application Developer February 2025 – June 2026
Biomedis, ITERA - Lampung

- Developed the "Deteksi Cemas" system, implementing a cross-platform mobile application using Flutter and Dart for user interaction and real-time monitoring.
- Built scalable backend APIs using Go with Gin and GORM, integrating a Mosquitto MQTT broker for live hardware telemetry data ingestion.
- Designed and optimized relational database schemas in MySQL to manage user authentication, sensor data logs, and assessment metrics securely.
- Containerized the backend services, database, and MQTT broker using Docker and Docker Compose to ensure reliable deployment and environment consistency.

Python GUI Developer March 2025 – May 2025
RTK-GPS, Remote

- Developed a web-based monitoring dashboard in Python using NiceGUI for an existing agricultural crop-sorting machine, focusing solely on the user interface layer.
- Built real-time views for machine statistics (crop count, runtime, efficiency), component status indicators (sorter, computer, camera, machine) with automatic problem detection, and interactive Plotly graphs.

- Integrated a live camera feed streamed from an edge device (Jetson) and exposed a FastAPI REST endpoint for serving dashboard data.
- Designed a responsive layout with Tailwind CSS classes and structured the app with a separate controller and layout module for easier maintenance.

PROJECTS

Deteksi Cemas – Anxiety Level Detection Mobile Application

Flutter, Go Gin, MySQL, Docker

- Developed a mobile application for anxiety level detection using Flutter, with a backend service built using Golang Gin and MySQL database integration.
- Integrated IoT devices and machine learning models developed by teammates to collect physiological data and provide anxiety level analysis.
- Containerized backend services using Docker to improve deployment consistency and application scalability.

MySDLC – Software Development Lifecycle Management Platform

Next.js, Go, GORM, MySQL, Docker Compose

- Built a project management platform using Next.js, Go, GORM, and MySQL.
- Implemented project tracking, SDLC phases, team collaboration, and role-based access control.
- Deployed using Docker Compose with automated container builds.

IoT Automatic Transfer Switch Monitoring System

ESP32, MQTT, Firebase, PostgreSQL

- Developed ESP32-based monitoring system for electrical parameters.
- Integrated MQTT communication, Firebase Realtime Database, and PostgreSQL storage.
- Designed backend services for real-time monitoring and historical data analysis.

EDUCATION

Institut Teknologi Sumatera August 2021 – November 2026
Bachelor of Informatics Engineering GPA: 3.32 / 4.00
Focused on Frontend Engineering, Backend Development, Database Management, Mobile Application Development, Version Control with Git, and Internet of Things (IoT) Systems.

Dicoding – Frontend and Backend Development February 2024 – July 2024
Certified Independent Study GPA: 4.00 / 4.00
Completed intensive training in Frontend and Backend Development, including web application development, JavaScript programming, React, backend services, and software development practices.

CERTIFICATIONS

Working with Microservices in Go (Golang) – Trevor Sawler – Udemy October 2026
Certificate: Verification Link

Learn Git Basics with GitHub – Dicoding December 2024
Certificate: Verification Link

Learn to Create Front-End Web for Beginners – Dicoding December 2024
Certificate: Verification Link

Beginner Back-End Learning with JavaScript – Dicoding December 2024
Certificate: Verification Link

Learn Intermediate Web Development – Dicoding December 2024
Certificate: Verification Link
